

# Release Notes—VTR Xchange 4.0

## New Features

- Multi-channel discrete audio output via new Audio Routing feature.
- Batch capture feature added. A pre-existing batch list, Flex file or ALE file can be opened and a batch capture of media can be performed. NOTE: VTR Xchange does not offer batch logging and capture, only batch capture from a pre-existing batch list.
- Apple script support for the application has been added.
- Added support for the playback of 23.98fps movie files at 29.97fps or 59.94fps. (Requires appropriate KONA or IoHD support.)

## Improvements and Fixes

- RP-188 and LTC timecode is now displayed in the main window during captures.
- General UI enhancements include:
  1. Transport buttons now reflect transport state while stepping using the keyboard.
  2. 720p 59.94 timecode display no longer counts to 59 frames.
  3. Double Size (⌘-2) and Fit to Screen (⌘-3) added to Windows menu.
  4. Added (⌘-L) keyboard shortcut for Looping.
  5. New checkbox in the preferences, "Open captured files", determines whether files are automatically opened after a capture is performed.
