

Release Notes—Version 8.1

Mac Software for KONA LHi

General

This release provides improvements for the KONA LHi. If you are installing your KONA LHi into a computer that has previously had another video capture card or drivers, we recommend running the AJA Conflict Checker utility BEFORE installing the KONA software. The AJA Conflict Checker will help you identify old drivers or software files that need to be removed before installing the new software. Also, please read the “ReadMeFirst.PDF” document on the installation CD, particularly if you are installing for the first time.

Installation Notes—Please Read

Note: *Version 8.1 supports Apple Final Cut Studio Version 3 and Version 2. Not all features will work with versions earlier than Version 3. Please ensure you use the correct software for your system. AJA Driver Compatibility as of KONA Version 8.1 software is as follows:*

FCP 7 - 6.0.x KONA Driver version 8.1 (Snow Leopard and Leopard OS compatible)
FCP 7 - 6.0.x KONA Driver version 6.5 (Leopard OS compatible version)
FCP 6.0.x - KONA Driver version 6.0.3 (Leopard and Tiger OS compatible version)

Please note that Easy Setups from earlier versions may not work properly in Apple Final Cut Pro 7.

Please ensure that you use the correct installer for the KONA model present in your system. If you install the wrong software, the KONA Control Panel will report “no board” due to incorrect driver installation. Also, if you should ever wish to regress to an earlier version of software, you will have to perform the following steps to ensure proper operation. *Do not try to simply run an older KONA installer over a newer version*—doing so will not properly remove the newer components and will lead to improper operation.

1. Run the KONA Uninstaller from the current installation.
2. Install the desired KONA software using its installer package.

After installing the AJA driver, if you experience any issues booting your computer, restart the computer while holding down the shift key (safe boot), uninstall the AJA driver and then install the NDD driver version instead. The AJA KONA driver version 8.1 NDD is the same as driver version 8.1, but removes the Macintosh Desktop Display feature.

Improvements and Fixes

- Fixed—Adobe After Effects Pink/Blue display of Apple ProRes 422 material
- Fixed—Movies always had a closed-captioning (CC) track, even if the VANC checkbox was not selected in the AJA Control Panel
- Improved scrubbing in Apple Final Cut Pro
- Improved RT playback in Apple Final Cut Pro

Recommended Configuration for Mac Computers
