Chapter 1 – Introduction

Overview

The AJA HD10MD4 is a miniature digital downconverter for converting HD-SDI video to standard definition SDI and analog component or composite video. The HD10MD4 uses a full 10-bit data path and multi-point interpolation to produce excellent quality down-converted video. In addition, the HD10MD4 converts 23.98 to a 59.94 Hz output video using the standard 3:2 pulldown technique. The output can be formatted for either 4:3 or 16:9 standard definition monitors. For 4:3 monitors, the output can be formatted for either the Letterbox or Crop modes. The HD10MD4 can also receive SD video and output a different aspect ratio. The HD10MD4 simultaneously passes video to both the SDI and analog outputs. Eight channels of embedded audio channel can also be passed to the SDI output.

User Controls

The direct user interface for the HD10MD4 is an eight position DIP switch accessible through a cut-out in the bottom of the unit. The exact function of the DIP switches are described in ["DIP Switches" on page 7](#).

The HD10MD4 also supports Mini-Config application control over its USB port to a connected PC or Mac.

Installation

Typically, installation consists of the following:

Direct Control

1. Disconnect DC power from the converter.
2. Configure the DIP switches for the desired equipment configuration and video formats.
3. Connect video equipment to the converter BNCs.
4. Apply power to the converter.

Mini-Config Control

1. Disconnect DC power from the converter.
2. Connect video equipment to the converter BNCs.
3. Apply power to the converter.
4. The converter will now run using the default factory settings. If you wish to alter the factory settings, you'll need to:
 - Set DIP switch 1 ON (right) to permit remote Mini-Config control.
 - Install the AJA Mini-Config software on your computer
 - Attach the converter via USB
 - Make your changes using Mini-Config setup screens.
 - This process is detailed in "[Chapter 2 Operation](#)" on page 7.

Chapter 2 – Operation

Default Operational Settings

The HD10MD4 Mini-Converter ships from the factory with the following configuration (all DIP switches Off - Left):

- Local (DIP switch) control
- Component video
- YPbPr format
- Pedestal Off
- Crop Off
- Monitor 4:3
- Focus Off
- Graticule Off

If these settings apply to your requirements, you can simply connect the video input and output signal cables and power up the unit.

For other applications, you can configure the unit using its DIP switch settings, or by using the Mini-Config application and a PC or Mac via USB.

DIP Switches

DIP switches on the bottom of the unit are used to configure it without a computer. The Left position is Off, the right position is On.

USB Control and Setup—Using AJA Mini-Config

Your AJA Mini-Converter can be used right out of the box for some applications since it is designed to recognize inputs and perform standard actions automatically by default. However, to use its full capability, you must use AJA's Mini-Config software application for PCs and Macs. This same application can be used to update to new Mini-Converter software released by AJA.

NOTE: DIP switch 1 must be ON (Remote, Right) to permit Mini-Config control of the unit.

Acquiring Mini-Config

AJA's Mini-Config application is available for download from the AJA website.

To download the latest Mini-Config package, which includes the Mini-Config application, Mini-Converter firmware, and documentation, go to:

<https://www.aja.com/products/mini-converters/mini-config-software>

Select either the Windows or Mac icon to download the desired version.

Mini-Converter Documentation

Included with the Mini-Config package is a complete set of documentation for all Mini-Converters supported by Mini-Config. A .PDF of the *Installation and Operation Guide* for the currently connected Mini-Converter can be accessed from the Mini-Config UI via the **Help/Manual** drop-down menu.

Documentation for all AJA Mini-Converters that use Mini-Config can also be accessed directly in the Mini-Config download package Documentation folder, and via the Documentation icon available on the Mac installer.

Documentation (and firmware) included with the Mini-Config application are the versions available at the time of distribution. However, Mini-Converter software, firmware and documentation are updated regularly, so newer versions may exist.

To download the latest documentation for an individual Mini-Converter, go to:

<https://www.aja.com/category/mini-converters>

and navigate to the Support web page of that Mini-Converter.

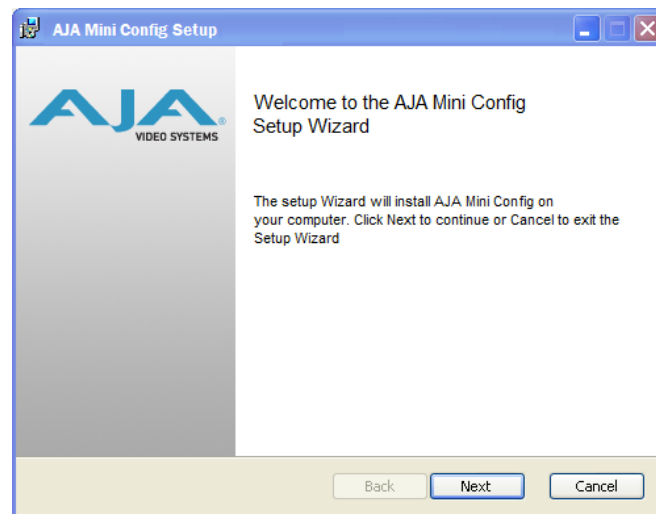

Installing Mini-Config

PC Installation

To install Mini-Config on a Windows PC:

1. Download the application from the AJA website (select the Windows icon on the Mini-Config Support web page).
2. Open the AJA_MiniConfig.zip file
3. Double-click on the **MiniInstaller.msi** file.
4. A Setup Wizard will guide you through the installation.

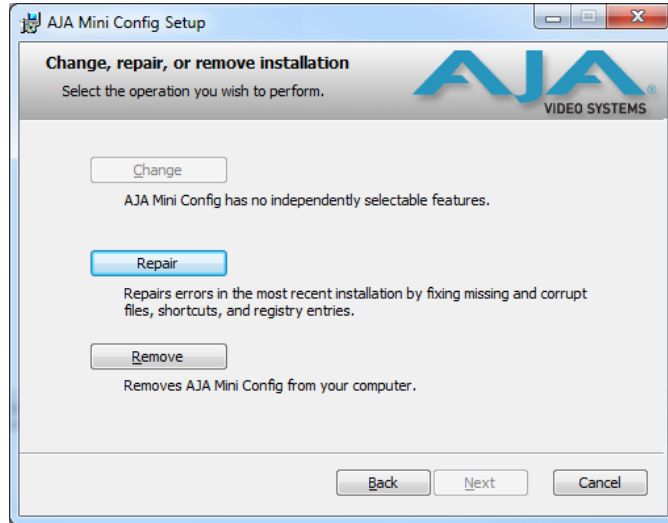

Figure 4. Mini-Config PC Setup Wizard

5. Click **Next** to begin. Answer the questions in the subsequent dialogues. When finished, an AJA Mini-Config shortcut will be installed on the desktop, and you will be able to locate the Mini-Config application in the AJA folder in the Programs listing.

NOTE: If the Mini-Config application already exists on the PC, a different Setup Wizard appears.

Figure 5. Mini-Config Setup Wizard, Reinstallation

With this screen you can **Repair** (reinstall) or **Remove** (uninstall) Mini-Config on the PC.

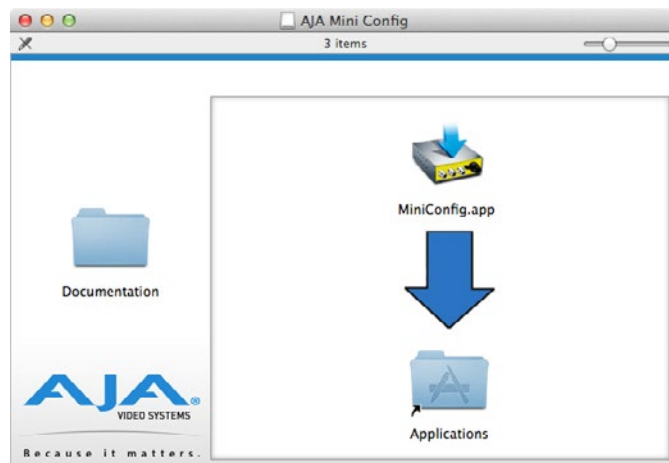

Mac Installation

To install the application on a Mac:

NOTE: Mac computers must be Intel-based (G5, G4 and earlier models will not work with Mini-Config).

1. Download the application from the AJA website (select the Apple icon on the Mini-Config Support web page).
2. Open the AJA_MiniConfig folder.
3. Double-click on the **AJAMiniConfig.dmg** file.
4. Answer the prompt and a utility program will be launched.

Figure 6. Mini-Config Mac Installer

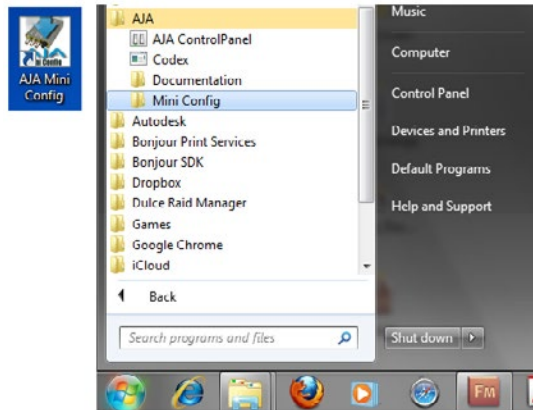

5. To complete the installation drag the **MiniConfig.app** icon to the Applications folder.

Running Mini-Config

Connect the Mini-Converter to the PC or Mac via the supplied USB cable. Connect the external power supply (supplied) to the Mini-Converter.

PC Startup

To run Mini-Config on a PC, double-click on the AJA Mini-Config icon on your desktop, or open the AJA folder in the program list and click on the AJA Mini-Config application located inside the Mini-Config folder.

Mac Startup

To run Mini-Config on a Mac, open the Applications folder and locate the AJA Mini-Config application. Double-click the application to launch it.

Saving Setups

A **File** drop down menu on the Mini-Config application bar allows you to save the current state of the Mini-Converter to a preset file for later recall.

Using this feature you can set up the converter for different applications, storing each configuration (**Save Preset As...**) with a unique name for easy recall (**Open Preset...**).

A **Revert to Factory Settings** menu item similarly allows you to change the settings back to AJA's factory defaults.

Operating Mini-Config

The Mini-Config application provides a graphic interface for viewing settings and updating software. It consists of an information area at the top that shows the available Mini-Converters attached to the computer via USB, with a graphical rendering of the selected Mini-Converter showing all the connectors and their current state.

Colored text next to the connectors indicates the signal type and what the Mini-Converter is doing:

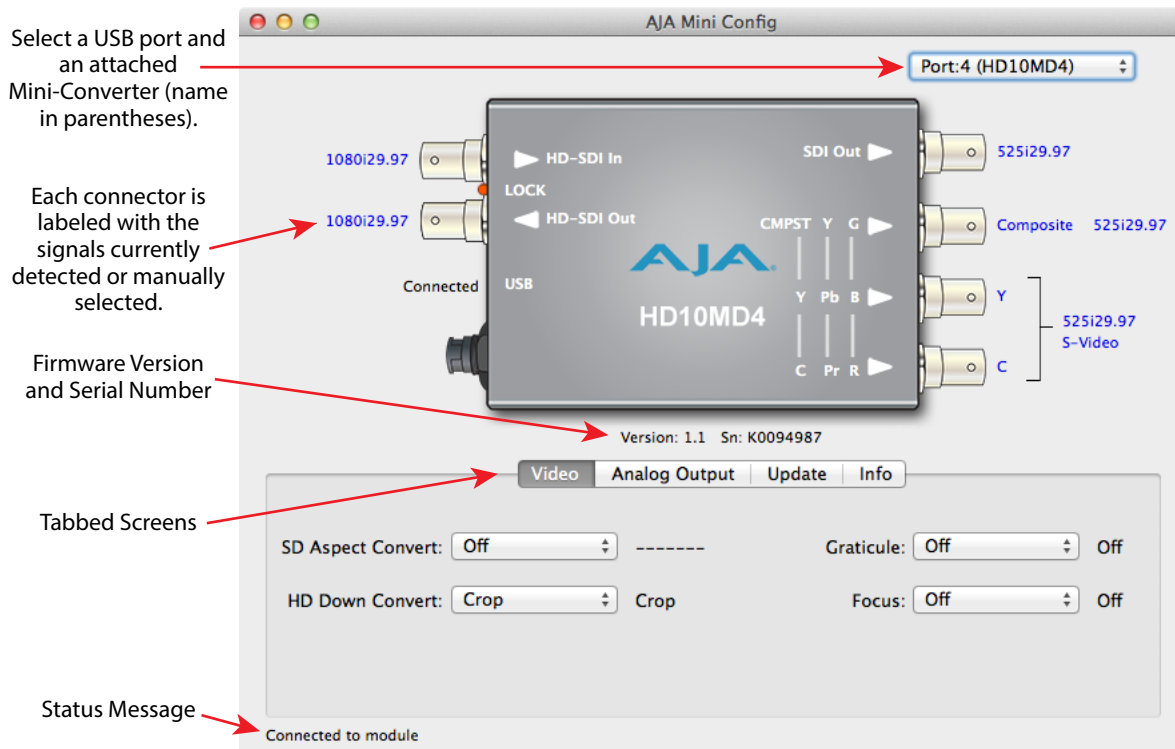

- Blue text indicates the values automatically selected
- Black text indicates values that you have manually selected
- Red text indicates the Mini-Converter is not detecting a signal, or cannot operate with the current user settings.

NOTE: Even if no output device is detected, the SDI connector text still shows the signal it is outputting.

NOTE: Configuration settings in red will change based on the attached output device as well as input signals. For improved accuracy and reliability, you should configure the Mini-Converter only when the target output device is attached and input signals are supplied at the inputs.

Screens are virtually the same on both PC and Mac, with subtle differences that reflect the general look of the platform environment.

Figure 7. Example Mini-Config Screen

Selecting a Mini-Converter with the pulldown menu causes this application to connect to the selected converter. The graphic of Mini-Converter and text below it provides:

- Type of converter
- Firmware version
- Serial number of the unit.

A status field at the bottom of the screen shows if your application is connected and communicating with the Mini-Converter.

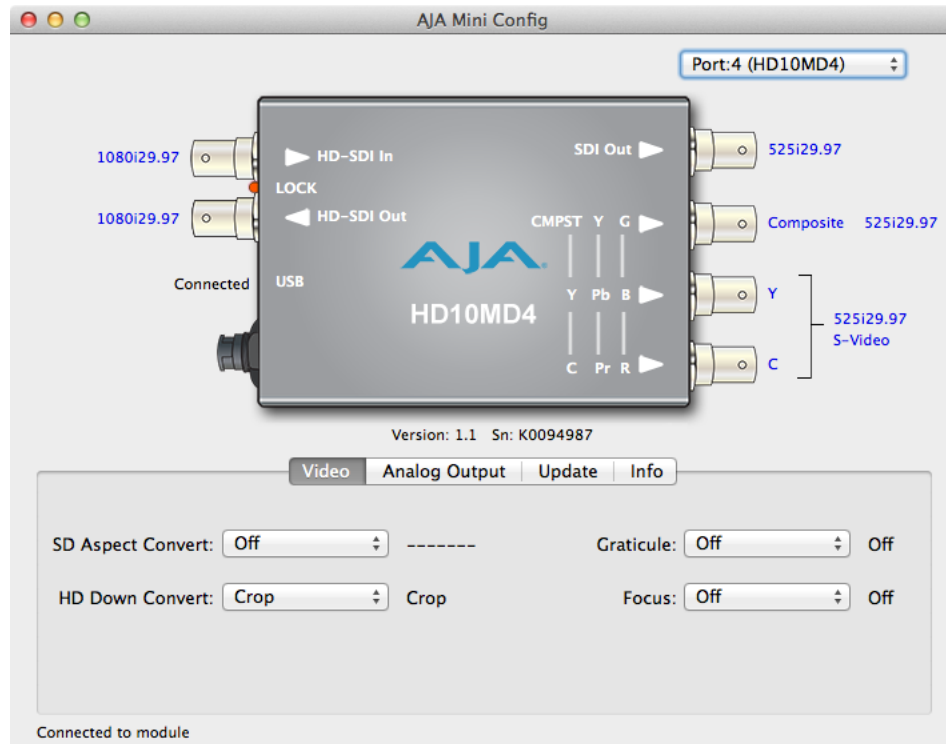

When configuring the Mini-Converter, select it from the top pulldown, view the current settings and change any values. Making a change communicates that new value to the Mini-Converter's non-volatile memory.

Tabbed Screens

The Tabs delineate control screens with groups of controls for each type of task to be performed.

The controls for the actual configuration parameters are specific to each Mini-Converter type. When you Click on any of the tab buttons, the pane below the tabs will change to match your tab selection. Any changes you make are immediately applied and will be saved, overwriting previous settings.

Video Tab Screen

Click on the Video tab to view and make changes to the converter's video processing settings.

SD Aspect Convert

Determines the mode when converting from SD input video to an SD output video format. There is no DIP switch equivalent for this control. The setting is saved in nonvolatile memory in the module and used for all subsequent operation:

- Off (default) - The input image is copied to the output with no scaling.
- Letterbox - The input frame is scaled vertically to a 16x9 letterboxed size (anamorphic to letterbox conversion).
- H Crop - The input frame is scaled horizontally to 16x9, then center-cropped (anamorphic to center crop conversion).
- Pillarbox - The input frame is scaled horizontally to make a pillarbox output (4x3 to anamorphic conversion).
- V Crop - The input frame is scaled vertically to make a vertically cropped output (letterbox to anamorphic conversion).
- 14x 9 - The input frame is scaled horizontally and vertically as a compromise between H Crop and Letterbox (anamorphic to 14x9 conversion).

HD Down Convert

Determines the mode when converting from HD input video to an SD output video format:

- Crop (default) - Image is cropped to fit new screen size.
- Letterbox - Image is reduced with black top and bottom added to image area, with the aspect ratio preserved.
- Anamorphic - HD image is converted to full-screen SD with a 16x9 aspect ratio (anamorphic).
- 14x9 - Image is reduced slightly with aspect ratio preserved. Black is added top and bottom, and the left and right sides are cropped.
- Auto AFD - Automatically selects the best Downconvert mode based on the input video's Active Format Description (AFD) code. If the input video is not carrying an AFD VANC code, the unit defaults to Crop.

Graticule

Turns on or off a graticule display indicating a 4:3 aspect ratio.

- Off (default)
- On

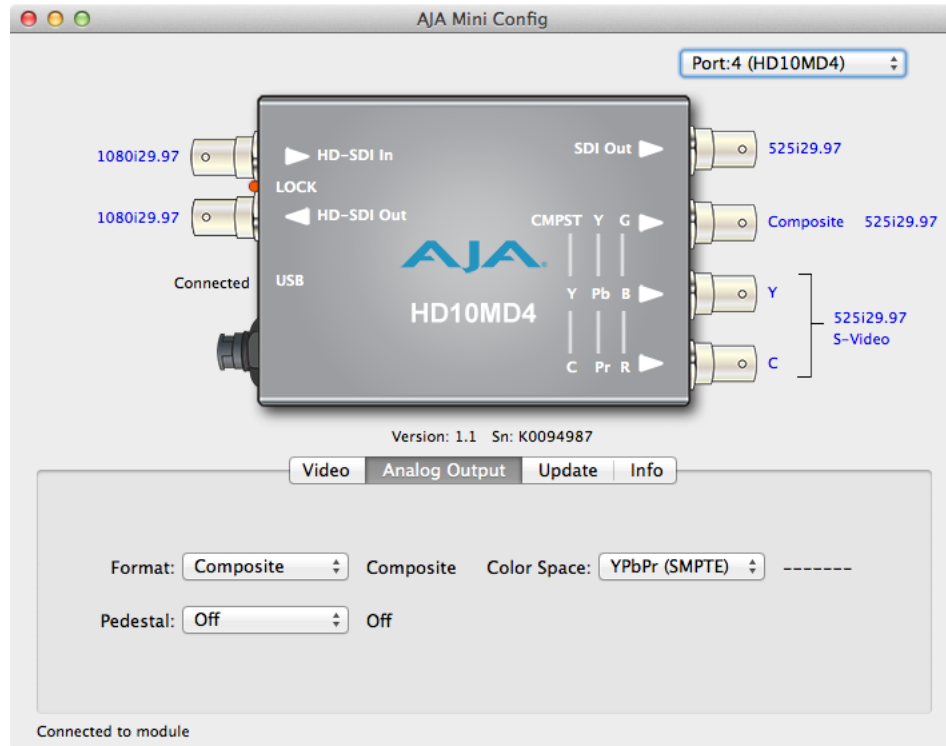

Graticule is only available with HD (16:9) input, Letterbox or Anamorphic HD Down Convert mode (either manually selected or AutoAFD), and with Focus set to Off. When inactive, status is dashes.

Focus

Zooms to center 720 x 486 (for 525i) or 720 x 576 (for 625i).

- Off (default)
- On

Analog Output Tab Screen

Click on the Analog Output tab to view and make changes to the converter's analog video output settings.

Format

Selects the desired analog output video format:

- Composite (default)
- Component

Pedestal

Sets the analog video black level:

- Off (default) - Sets black level at 0 IRE.
- On - Sets black level at 7.5 IRE

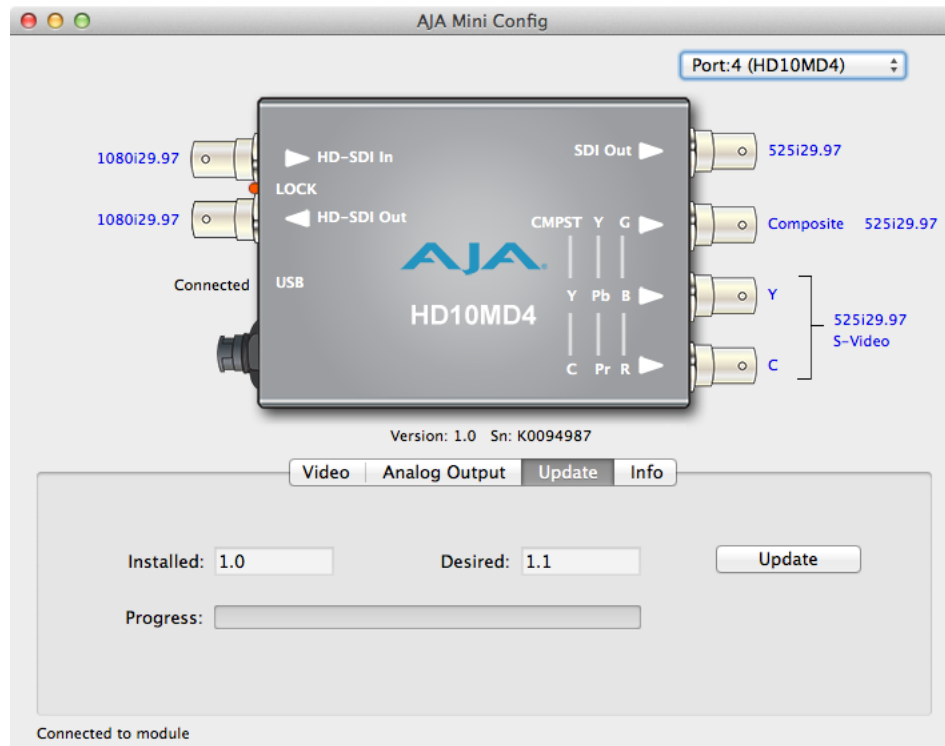

Pedestal is only active if the analog output is 525i composite, or 525i component and Component Color Space is RGB or YPbPr (Betacam). When inactive, status is dashes.

Color Space

Selects the desired output video format color space:

- YPbPr (SMPTE) (default)
- YPbPr (Betacam)
- RGB

Update Tab Screen

Use this Update tab screen to view the software version currently installed on the converter or install new software.

NOTE: When discussing Mini-Converters, “Firmware” is software that will be stored in the Mini-Converter’s non-volatile memory and used when it is powered up. This is something different than the Mini-Config application software. The version numbers shown in the Update screen refer only to the firmware.

Installed

This field shows the version of the firmware currently installed inside the Mini-Converter.

Desired

This field shows the version of firmware embedded in the Mini-Config application which you can install into the Mini-Converter by clicking the Update button.

Update

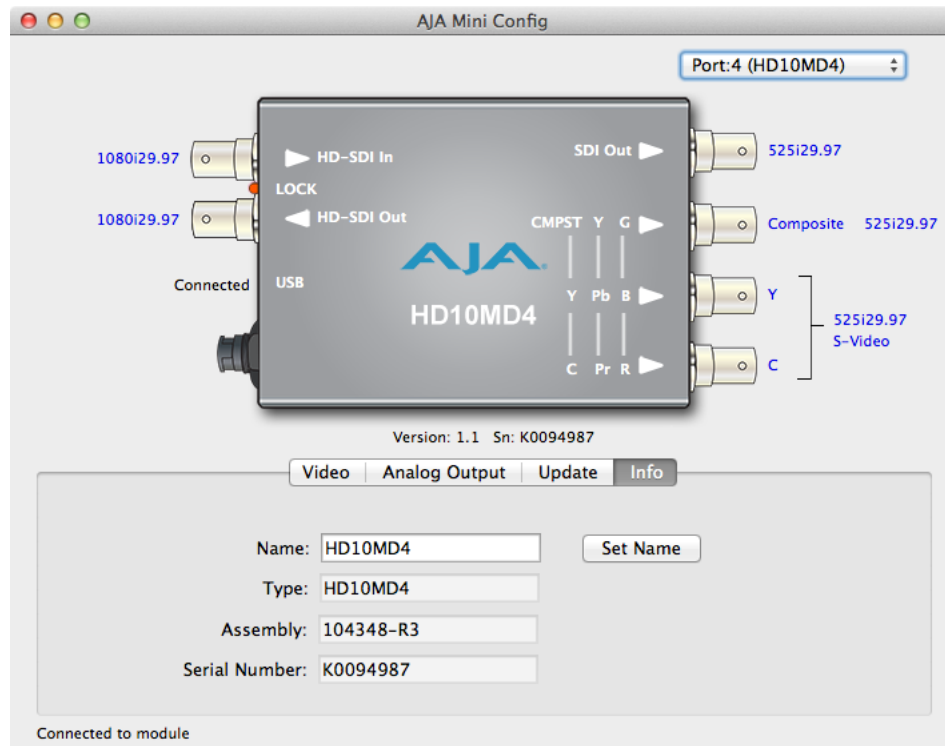

This button initiates a software update operation loading the “Desired” version of firmware into the Mini-Converter’s non-volatile memory.

Progress

This indicator bar shows the progress of firmware installation.

See [“Acquiring Mini-Config” on page 9](#) and [“Installing Mini-Config” on page 9](#) for more information.
