

AJA Mini-Config Release Notes - v2.26.10

Mini-Config 2.26.10 Software

Introduction

Mini-Config v2.26.10 software is a maintenance release which introduces two new features. The Hi5-12G can now support up to 100 frames of audio delay and the ROI-DP now supports analog audio embedded into the DisplayPort output. Please carefully review the release notes to check which converters have new features and fixes. It is highly recommended that you update the firmware to avoid any potential issues.

Be sure to consult the Installation and Operation Guide (User Manual) for detailed information about features and configuration guidelines. The most current documentation can always be found on the [Mini-Config Support Page](#).

New Features in v2.26.10

Hi5-12G (v1.17)

- Ability to add up to 100 frames of audio delay using the slider or enter the values manually via the text box.

ROI-DP (v1.10)

- Adds ability to embed analog audio inputs into the DisplayPort output.

Fixes, Changes, and Improvements in v2.26.10

12GM (v1.17)

- Fixes an issue where the RGB Full Range 10-bit input signal is incorrectly interpreted as 8 bits.
- Prevents an issue where some parameters can no longer be set and the unit becomes non-functional. Customers experiencing this issue should contact AJA Technical Support via the contact information at the end of these release notes.

12G-AM (v1.4)

- Fixes an issue where changing video formats would cause noise on the audio outputs.

3G-AM (v1.3)

- Fixes an issue where changing video formats would cause noise on the audio outputs.

HA5-Plus (v1.1)

- Fixes an issue where the HA5-PLUS was legalizing YCbCr video causing super blacks and super whites to be clipped.

HA5-Fiber (v1.4)

- Fixes an issue where the HA5-Fiber was legalizing YCbCr video causing super blacks and super whites to be clipped.

Hi5-12G (v1.17)

- Fixes an issue where some HDMI sinks would cause the Hi5-12G to output UHD/4K HFR 4:2:0 when the desired output is 4:2:2 or 4:4:4.
- Fixes an issue where the Input tab Video Source and Switch Over Priority settings can disrupt output.
- Fixes an issue where the RGB Full Range 10-bit input signal is incorrectly interpreted as 8 bits.

- Fixes an issue where a 1080p60 4:4:4 input signal creates a green overlay when the Fiber In option is selected.

Hi5-4K-Plus (v1.16)

- Fixes an issue where the RGB Range mode was missing the “Auto” input option.
- Fixes an issue when converting RGB to YCbCr, where YCbCr would be the wrong range depending on input and output RGB range settings.

V2Digital (v2.6)

- Fixes an issue where the chroma blue and chroma red channels would swap when the analog signal was switched on and off or the input signal format was changed.

Installing the Latest Software

Mini-Converters come from the factory with the most current version of firmware pre-installed. To get the latest version of Mini-Config, visit the AJA website support area and select your Mini-Converter from the list:

<https://www.aja.com/category/mini-converters#support>

The Mini-Config software can be found in the Software section of the support page for your Mini-Converter. Previous releases of the AJA Mini-Config software are also available in the Software Archive section for each supported Mini-Converter.

Firmware Upgrade Procedure

The manual available under the support listings for your AJA Mini-Converter describes the firmware update process; please refer to it in order to properly update your firmware. Product manuals are also installed with the software in the /AJA/Mini-Config/Documentation/folder.

Individual product manuals are available online for download from the Mini-Converter section of the AJA website: <http://www.aja.com/support>.

Technical Support

AJA Technical Support is free and available to help you answer questions or resolve issues with any of your AJA products.
